Noteworthy Contributions With Wide Impact

I am the co-inventor (with my former Ph.D. student Andreas Gal) of the "Trace Tree" compilation technique, which has been transitioned successfully from academic research into one of the most widely distributed open-source projects. From version 3.5 (June 2009) onwards, the JavaScript engine in *Mozilla's Firefox* browser has been based directly on my academic research (see publication C.58).

   Furthermore, since version 4.0 (March 2011), the *Firefox* browser additionally contains the "Compartmental Memory Manager" developed in collaboration between my lab and Mozilla (see publication C.69). No fewer than four of my former students with completed Ph.D.s are now employed full-time at Mozilla.
